

Easy adaptation for different products:

## BELLAFORM-multiple layer extrusion system ME 40-5

With the ME 40-5, BELLAFORM has developed a multiple layer extrusion system, which facilitates significantly the product exchange.

For PA tubes up to 5 layers (possible layer construction: PA12; PA adhesive; EVOH; PA adhesive; PA12/6) with an exchange system for smooth-bore tubes and corrugated tubes.

### Benefit from the advantages:

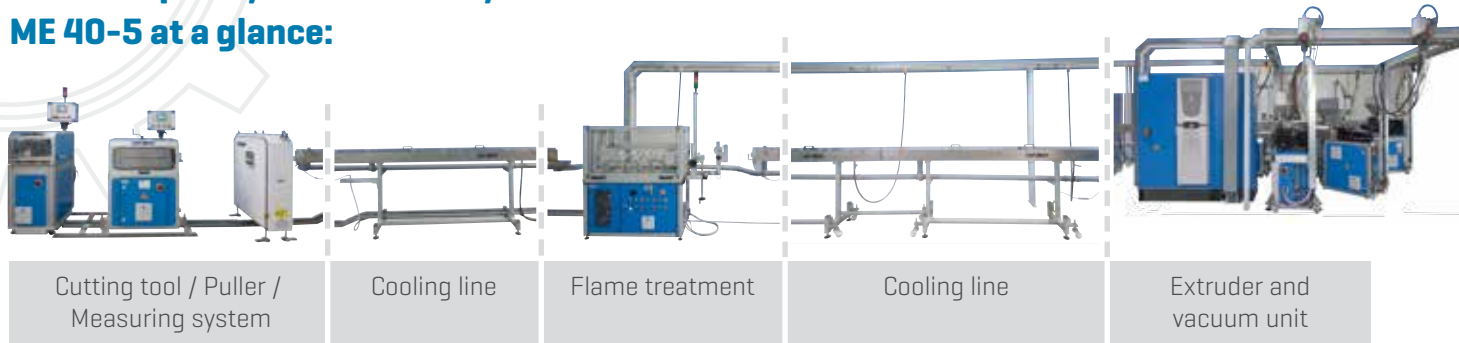

- + Intelligent connection system: automated recognition of the extruder facilitates the product exchange
- + Quicker and more comfortable exchange from smooth-bore tube to corrugated tube
- + Cable railway above the system for enhanced free space at the hall floor and reduced hazard of accidents
- + Compact design of the extruder and downstream components by integrated control cabinet
- + Process data collection module and process data analysis tool for a higher product quality and reduced product costs

### Design characteristics of multiple layer extrusion system ME 40-5

- Speed: up to 100 m/min
- Exchange system for smooth-bore tubes (4-32 mm) and corrugated tubes (5-50 mm)
- Measuring systems of renown manufacturers
- Flame treatment
- Complete follow-up
