

Multi layer spray head with tangential distributor technology

Latest tool technology.
Highest level of precision.

Equipment features:

- + 2–7 layers:**
Identical dimensions in the intermediate and distribution plates enable fast and simple conversion to more or fewer layers.
- + Compact and space-saving:**
The diameter is 180 mm. The low proportion of melt contents ensures reduced flushing times.
- + Simple components:**
All plates are centred by two continuous guide rods and fixed with continuous screws. Simple components and small dimensions make the multilayered spray head particularly good value.
- + Modular structure:**
Adjustments to different plate variations can be carried out easily.
- + Easy to clean:**
The multilayered spray head is easy to clean because the melt delivery can be removed completely.

Multi layer spray head with tangential distributor technology

We work closely with our clients to make our projects a success.

Tell us which requirements your products have to fulfil and we will work with you to develop an individual system adapted to the ideal raw material.

Questionnaire for tender preparation:

Product description:

Layer:	Thickness:	Material:	Producer:
Layer 1			
Layer 2			
Layer 3			
Layer 4			
Layer 5			
Layer 6			
Layer 7			

Required ejection:

Metres / minute	
-----------------	----------------------

Further processing:

- ☐ Cutter
- ☐ Winder
- ☐ Laydown belt
- ☐ Packaging
- ☐ Buffer line
- ☐ Palettising

Your contact details:

Please include a **drawing of the product**.

Thank you!
